COMPETENT AUTHORITY CERTIFICATION FOR A
TYPE B(U)F FISSILE
RADIOACTIVE MATERIALS PACKAGE DESIGN
CERTIFICATE USA/9325/B(U)F-96, REVISION 3

The Competent Authority of the United States certifies that the radioactive material package design described in this certificate satisfies the regulatory requirements for a Type B(U)F package for fissile material as prescribed in the regulations of the International Atomic Energy Agency¹ and the United States of America² The package design is approved for use within the United States for import and export shipments made in accordance with applicable international and domestic transport regulations.

1. Package Identification - HI-STAR 180.
2. Package Description and Authorized Radioactive Contents - as described in U.S. Nuclear Regulatory Commission Certificate of Compliance No. 9325, Revision 3 (attached).
3. Criticality - The minimum criticality safety index is 0.0. The maximum number of packages per conveyance is determined in accordance with Table 11 of the IAEA regulations cited in this certificate.
4. General Conditions -
 - a. Each user of this certificate must have in his possession a copy of this certificate and all documents necessary to properly prepare the package for transportation. The user shall prepare the package for shipment in accordance with the documentation and applicable regulations.
 - b. Each user of this certificate, other than the original petitioner, shall register his identity in writing to the Office of Engineering and Research, (PHH-23), Pipeline and Hazardous

¹ "Regulations for the Safe Transport of Radioactive Material, 2012 Edition, No. SSR-6" published by the International Atomic Energy Agency (IAEA), Vienna, Austria.

² Title 49, Code of Federal Regulations, Parts 100-199, United States of America.

CERTIFICATE USA/9325/B(U)F-96, REVISION 3

Materials Safety Administration, U.S. Department of
Transportation, Washington D.C. 20590-0001.

- c. This certificate does not relieve any consignor or carrier from compliance with any requirement of the Government of any country through or into which the package is to be transported.
 - d. This certificate provides no relief from the limitations for transportation of plutonium by air in the United States as cited in the regulations of the U.S. Nuclear Regulatory Commission 10 CFR 71.88.
 - e. Records of Management System activities required by Paragraph 306 of the IAEA regulations¹ shall be maintained and made available to the authorized officials for at least three years after the last shipment authorized by this certificate. Consignors in the United States exporting shipments under this certificate shall satisfy the applicable requirements of Subpart H of 10 CFR 71.
5. Marking and Labeling - The package shall bear the marking USA/9325/B(U)F-96 in addition to other required markings and labeling.
6. Expiration Date - This certificate expires on May 31, 2025. Previous editions which have not reached their expiration date may continue to be used.

This certificate is issued in accordance with paragraph(s) 810 and 816 of the IAEA Regulations and Section 173.471 and 173.472 of Title 49 of the Code of Federal Regulations, in response to the May 11, 2020 petition by Holtec International, Camden, NJ, and in consideration of other information on file in this Office.

2. PREAMBLE

- a. This certificate is issued to certify that the package (packaging and contents) described in Item 5 below meets the applicable safety standards set forth in Title 10, Code of Federal Regulations, Part 71, "Packaging and Transportation of Radioactive Material."
 - b. This certificate does not relieve the consignor from compliance with any requirement of the regulations of the U.S. Department of Transportation or other applicable regulatory agencies, including the government of any country through or into which the package will be transported.
3. THIS CERTIFICATE IS ISSUED ON THE BASIS OF A SAFETY ANALYSIS REPORT OF THE PACKAGE DESIGN OR APPLICATION

4. CONDITIONS

This certificate is conditional upon fulfilling the requirements of 10 CFR Part 71, as applicable, and the conditions specified below.

5.

(a) Packaging

- (1) Model No.: HI-STAR 180
- (2) Description

The HI-STAR 180 package is designed for transportation of undamaged irradiated Uranium Oxide (UO₂) and Mixed Oxide (MOX) fuel assemblies in baskets, or of individual UO₂ fuel rods in quivers. The fuel basket provides criticality control and the packaging body provides the containment boundary, helium retention boundary, moderator exclusion barrier, gamma and neutron radiation shielding, and heat rejection capability. The outer diameter of the HI-STAR 180 packaging is approximately 2700 mm without impact limiters and approximately 3250 mm with impact limiters. The maximum gross weight of the loaded HI-STAR 180 package is 140 Metric Tons.

Two interchangeable fuel basket models, designated F-32 and F-37, contain either 32 or 37 Pressurized Water Reactor (PWR) fuel assemblies respectively, in regionalized and uniform loading patterns. The fuel basket, made of Metamic-HT both as structural and neutron absorber material, features a honeycomb structure and flux traps between some but not all cells.

A quiver is a hermetically sealed container for individual fuel rods which may be leaking, broken or fragmented (i.e. fuel debris) or purposely punctured to relieve internal pressure.

5.(a)(2) Description (continued)

Packaging Body

The cylindrical steel shell containment system is welded to a bottom steel baseplate and a top steel forging machined to receive two independent steel closure lids, with each lid being individually designated as a containment boundary component. The outer surface of the the cask inner shell is buttressed with a monolithic shield cylinder for gamma and neutron shielding. Each closure lid features a dual metallic self-energizing seal system designed to ensure its containment and moderator exclusion functions. For this package, the inner closure lid inner seal and the inner closure lid vent/drain port cover inner seals are the containment boundary components on the inner lid; the outer closure lid inner seal and the outer closure lid access port plug seal are the containment boundary components on the outer lid.

Impact Limiters

The HI-STAR 180 package is fitted with two impact limiters fabricated of aluminum honeycomb crush material completely enclosed by an all-welded austenitic stainless-steel skin. Both impact limiters are attached to the cask with 16 bolts.

(3) Drawings

The packaging shall be constructed and assembled in accordance with the following Holtec International Drawings Numbers:

- (a) HI-STAR 180 Cask Drawing No. 4845, Sheets 1-7, Rev. 14
- (b) F-37 Fuel Basket Drawing No. 4847, Sheets 1-4, Rev. 9
- (c) F-32 Fuel Basket Drawing No. 4848, Sheets 1-4, Rev. 9
- (d) HI-STAR 180 Impact Limiter Drawing No. 5062, Sheets 1-5, Rev. 7

5.(b) Contents

(1) Type, Form, and Quantity of Material

- (a) Undamaged UO₂ and MOX PWR fuel assemblies with a Zr cladding type, or dummy fuel assemblies, meeting the Condition Nos. 5.b(1)(c) through 5.b(1)(k), and with the characteristics listed in Table 1.a below.
- (b) Undamaged UO₂ and MOX PWR fuel assemblies with a Zr cladding type, or dummy fuel assemblies, meeting the Condition Nos. 5.b(1)(c) through 5.b(1)(k), and with the

- (c) Damaged fuel assemblies, i.e., assemblies with known or suspected cladding defects greater than pinhole leaks or hairline cracks and which cannot be handled by normal means, as well as fuel debris, non-fuel hardware and neutron sources are not authorized contents.
- (d) The maximum initial enrichment of any UO₂ assembly is 5.0 percent by weight of uranium-235.
- (e) Each loaded MOX fuel assembly must meet one of the criteria sets (1-4) from Table 2 and one of the criteria sets (1-3) from Table 3. MOX fuel isotopic compositions in Table 2 are bounding for dose and decay heat and used to establish the loading patterns. MOX fuel isotopic characteristics in Table 3 are bounding for criticality purposes.

Table 2

- (f) The post-irradiation minimum cooling time, maximum burnup, maximum decay heat load, and minimum initial enrichment per assembly are listed in Tables 1.2.8 and 1.2.9 of the application. The F-32 and F-37 fuel basket cell numbering and quadrant identification are depicted in Figures 1.2.3 and 1.2.4 of the application, respectively.
- (g) Regions, cells and quadrants for regionalized loading of the F-32 and F-37 baskets are identified in Tables 1.2.6.a and 1.2.6.b of the application. Table 1.2.7.a provides the minimum burnup requirements for the F-37 basket, based on initial enrichment for various configurations, while Table 1.2.7.b provides maximum initial enrichment limits for fresh UO₂ fuel assemblies for certain configurations.
- (h) In-core operating limits for those assemblies that need to meet the burnup requirements in Table 1.2.7.a of the application are as follows:

Parameter	Requirement
Assembly Average Specific Power	≤ 39.4 MW/MTU
Assembly Average Moderator Temperature	≤ 597° K
Maximum Assembly Average Fuel Temperature	1127°K
Core Average Soluble Boron Concentration	≤ 700 ppmb

5.(b)(1) continued

- (i) For those spent fuel assemblies that need to meet the burnup requirements specified in Table 1.2.7.a of the application, a burnup verification shall be performed either in accordance with Section 6.F.3.1 or 6.F.3.2 of the application.
- (j) Allowable loading patterns and fuel specifications for each basket region are referenced in Tables 1.2.8 and 1.2.9 of the application. Alternative fuel specifications for each regional loading pattern are presented in Table 1.2.10 of the application.
- (k) The maximum decay heat for either the F-32 or F-37 basket model is 32 kW per basket, with 8 kW maximum decay heat per basket quadrant.
- (l) Partially loaded casks must not have more than 12 empty locations. Contents must be evenly spread to the extent practicable. Dummy fuel assemblies may be used to achieve the required mass.
- (m) Up to two quivers are allowed in cells Nos. 1 and 32, or 10 and 23, of the F-32 basket, or cells Nos. 4 and 34, or 8 and 30, of the F-37 basket (per Figures 1.2.3 and 1.2.4 of the application).
- (n) The maximum decay heat per quiver, in either the F-32 or F-37 basket, shall be in accordance with the basket cell heat loads corresponding to the allowed quiver basket cells, per Tables 1.2.8 and 1.2.9 of the application.

5.b.(2) Maximum Quantity of Material Per Package

- (a) 32 or 37 PWR fuel assemblies, as described in 5(b)(1), in the F-32 or F-37 basket respectively.
- (b) 32 or 37 PWR fuel assemblies, as described in 5(b)(1), in the F-32 or F-37 basket respectively, with a maximum of 96 fuel rods, separated from 2 fuel assemblies, in quivers.

5.(c) Criticality Safety Index (CSI)= 0.0

6. In addition to the requirements of Subpart G of 10 CFR Part 71:

- (a) The package shall be prepared for shipment and operated in accordance with Chapter 7 of the application.
- (b) The package shall meet the acceptance tests and be maintained in accordance with Chapter 8 of the application.

7. The personnel barrier shall be installed and remain installed while transporting the package, if

necessary to meet package surface temperature and/or package dose rates requirements.

8. The package authorized by this certificate is hereby approved for use under the general license provisions of 10 CFR 71.17.
9. Transport by air of fissile material is not authorized.
10. The package may be used in the U.S. for shipment of UO₂ fuel meeting the above specifications.
11. Expiration Date: May 31, 2025
